Section 01

What is TRISM 6?

1.1 What is TRISM 6?

TRISM™ 6 is a unique hardware and software system that provides all the tools needed for the creation and distribution of financial cards of any kind.

Initially introduced in the late 1990s, TRISM provides instant and central issuance of Visa and Mastercard credit and debit cards to financial institutions worldwide.

TRISM works seamlessly with the PCI-certified and listed Hardware Security Module (HSM Duo and HSM XT) to ensure complete privacy of cardholders' information.

From centrally issued, pre-printed cards to customer created cards available for immediate use, TRISM 6 boasts the versatility to meet any institution's most specific demands.

1.2 TRISM 6 user interface

1. Main menu.
2. Quick launch toolbar.
3. Dual Control Login: Some TRISM features require "dual control" login. A second user that is different than the user currently logged in (and with the appropriate permissions), must enter their login credentials to access these features.

Section 02

Request

2.1 Order Card

1. On the main menu, click **Request > Order Card**, or click .
2. Select the appropriate BIN in the **Select Product** drop-down menu (highlighted in red).

Note: Only select a BIN if you are going to manually enter the information.

3. **If a core/processor interface is used**, select the interface, search by member or card number, and enter the member or card number. **If searching by card number**, the cardholder's information is populated in the information fields. **If searching by member number**, select the corresponding account in the bottom menu, then the account's information is populated in the information fields.

If a core/processor interface is not used, complete the address information, security information, and contact information fields. After step 4.c, click **Accounts** in the Account Information menu, then enter the customer's account number and ChkSavDesignator. One account must have **Primary** selected. The **Accounts** button only appears when using Mastercard dps.

ChkSavDesignator Values:

- D = checking
- S = savings

Account 1

☐ Primary

Number

TypeID

ChkSavDesignator

Descriptor

Balance

Status

4. Card Information

- Click **Get Card #** to automatically generate the card number (if **Auto Card Number** is enabled in the BIN's format settings) or enter it manually.
- Select the card stock from the drop-down menu.
- Enter the customer's name, business name (if desired), and the card's expiration date, if not automatically generated.
- Select the PIN method.
- Click **Get PIN**. The PIN is generated if specified, otherwise the PIN pad beeps.

Note: The Verifone Vx805 and P200 PIN pads do not have the beep functionality.

Enter the desired PIN on the PIN pad. Press the green Enter button. The PIN pad beeps again. Re-enter the PIN and press the green Enter button to confirm the PIN.

- The card's offset is displayed after the PIN is entered.

5. Personalizing and Previewing Cards – See [A.3 Custom image guidelines](#) for image guidelines.
 - a. Select a gallery image from the drop-down menu or click **Personalize**. If only one image is in the gallery destination folder, that image displays automatically.
 - b. Click **Browse** and navigate to the folder containing the custom image.
 - c. Select the image and click **Open**.
 - d. To crop the image, click and drag an area on the image on the left.

- e. If applicable, select the desired template from the drop-down menu in the bottom left of the screen.
 - f. Click **Save** when personalization is complete.
 - g. Click **Back** to preview the back of the card.
6. Job Information

Select the following information from the drop-down menus:

 - a. Device: Card Printer
 - b. Card Status
 - c. Job Status:
 - **Ready**: card prints immediately upon completion.
 - **Paused**: card does not print until state is changed to Ready in the Queue.
 - **Manual**: card does not print until it is manually fed into printer (not available with all printers).
7. Click **Complete** when all required fields are entered, and personalization is complete.

2.2 Edit Permissions

The **Edit Permissions** window allows a user to make certain fields in the **Order Card** window editable or required.

On the main menu, click **Request > Edit Permissions**. Select a card type to edit its permissions.

The fields highlighted in yellow on the following screen have editable permissions.

The screenshot shows the 'Edit Permissions' window with the following sections and fields:

- Search:** Search Criteria (highlighted), Search button.
- Card Information:** Select Product, Card Number, Select Card Stock, Cardholder Name (highlighted), Business Name (highlighted), Exp. Date, PSN, PSN, Offset (highlighted), Get PIN, PIN Method.
- Image Selection:** Loading... dropdown, Personalize button.
- Job Information:** Select Job Type, Select Device, Select Card Status, Select Job State, Select Vault, Order Card button, Close button.
- Address Information:** Foreign checkbox, Address 1 (highlighted), Address 2 (highlighted), City (highlighted), State (highlighted), Zip (highlighted), Country (highlighted), Misc (highlighted).
- Security Information:** Mother's Maiden Name (highlighted), Date of Birth (highlighted), SS# / Tax ID (highlighted), Drivers License (highlighted), Misc. Data 1 (highlighted), Misc. Data 2 (highlighted).
- Contact Information:** Phone Number 1, Phone Number 2, Phone Number 3, Phone Number 4, Email (highlighted).
- Account Information:** Account (highlighted), Account (highlighted), Account (highlighted), Account (highlighted), Member Number (highlighted).

You can change the colors of the **Editable**, **Required** and **Single Required** fields in **6.11 Theme**.

The screenshot shows the 'Card Information' section with the following fields:

- 4. Portico 1 dropdown
- Card Number
- Select Card Stock dropdown
- Cardholder Name (highlighted in cyan)
- Business Name (highlighted in yellow)
- Exp. Date
- Offset (highlighted in yellow)
- PIN Method dropdown

A tooltip is shown for the 'Cardholder Name' field with the following options:

- ☒ IsEditable
- ☒ IsRequired
- ☒ isSingleRequired

- **IsEditable:** enables input of text.
- **IsRequired:** field must be filled to complete request.
- **IsSingleRequired:** one out of all Single Required fields per panel must be completed.

For example, in the Security Information panel, **Mother's Maiden Name**, **SS#/Tax ID**, and **Drivers License** are single required, so one of these three fields must be completed to process the request.

Security Information

Mother's Maiden Name

2.3 Re-PIN

- On the main menu, click **Request > Re-PIN**.
 - If the PINpad has a card reader, a window prompts you to swipe the card to re-PIN.

Warning

Swipe Card

Cancel

- If a card reader is not used or the card is not available, the **Order Card** form is displayed for card number information entry.
- Select the PIN method, enter or generate the PIN
 - Click **Complete**.

2.4 Read a Card

On the main menu, click **Request > Read a Card**.

If a PINpad with a card reader or USB card reader is detected, you can swipe a card to display its track data (Card Number, Format Code, Expiration Date, and so on).

Field Name	Data	
Format Code	B	
Card Number	5555560002234547	
Name	^BRADY/JEN	
Expiration Date	2006	
Service Code	101	
Member Number	1	
Offset	3386	
Misc. Data	0000000000	
CVV	123	
Misc. Data	000000	

2.5 PIN mailer

On the main menu, click the **Personal icon** > **Request** > **PIN Mailer**. A PIN mailer can be printed in this window if one is not printed at the time of card creation.

The screenshot shows the PIN Mailer window with the following sections:

- Search:** Includes a dropdown menu, a search criteria field, and a 'Search' button.
- Card Information:** Includes a card type dropdown (e.g., '2 Visa Debit'), a card number field (e.g., '222456*****5555'), a card stock dropdown, a business name field, an expiration date field, an offset field (e.g., '5453'), a 'Get PIN' button, and a PIN method dropdown (e.g., 'PinPad').
- Image Selection:** Includes a 'Loading...' dropdown and a 'Personalize' button.
- Job Information:** Includes dropdowns for 'Select Job Type', 'Select Device', 'Select Card Status', 'Select Job State', and 'Select Vault'. A 'Print Mailer' button is highlighted with a red box, and a 'Close' button is below it.
- Address Information:** Includes a 'Foreign' checkbox, an address field (e.g., '123 Main St'), an 'Address 2' field, a city/state/zip field (e.g., 'Dallas TX 55555'), a country field, and a 'Misc' field.
- Security Information:** Includes fields for 'Mother's Maiden Name', '11/04/1974', '43251691', 'Drivers License', 'Misc. Data 1', and 'Misc. Data 2'.
- Contact Information:** Includes fields for '1234567890', 'Phone Number 2', 'Phone Number 3', 'Phone Number 4', and 'Email'.
- Account Information:** Includes fields for 'Account' (multiple) and 'Member Number'.

- In the **Search** area of this window,
 - In the first drop-down box, select an **Interface** (if there is more than one available).
 - In the second drop-down box select a **Search Criteria Type** (if there is more than one available).
 - In the **Search Criteria** field, enter the required information and click **Search**.
- In the **Card Information** area of this window, select the desired card number to populate the customer information.
- Click **Print Mailer**.

2.6 CVV2 Calculator

- On the main menu, click **Request** > **CVV2 Calculator**.
- Verify the keys entered in HSM Manager are correct.

The screenshot shows the CVV2 Calculator window with the following fields:

- BIN:** A dropdown menu showing '4. Portico 1'.
- Card Number:** A text field containing '5434680933499881'.
- Exp Date:** A text field containing '01/21'.
- CVV2:** A text field containing '123'.
- Calculate:** A button highlighted with a red box.

- Enter the BIN, card number, and expiration date of an existing card.
- Click **Calculate**. If the CVV2 on the card and the generated CVV2 match, the keys are correct.

2.7 Import

1. On the main menu, click **Request > Import > Standard** (or an alternative).

2. Click **Browse** to select your import file
3. Click **OK**.

A list of failed cards is shown in the list view with the error per card. Any card not in this list view is successful and, in the queue, depending on your format settings.

Section **03**

Queue

3.1 Card queue

The queue displays all cards that have been ordered and have not yet printed.

On the main menu, click **Queue**, or click .

Note: If a Card Information window is open at another workstation or branch, the card cannot be printed, deleted, or changed. In the process state in the queue, this shows as "Trism locked".

- **Change Job Status** allows you to select the card status as ready photo, paused photo, manual photo, or card verified.
- To delete a card from the queue, select it and press **Delete** on your keyboard.

Section 04

Reports

Field	Description
Device Inventory	
Starting Inventory	Quantity of cards in device at the beginning of the day (only greater than zero if cards are not removed at end of previous day).
Inventory Added	Quantity of cards added to device throughout the day.
Inventory Removed	Total quantity of cards removed from vault device.
Manually Added	Quantity of cards added manually during the order card process.
Used Inventory	Quantity of cards not destroyed or returned to inventory; successfully printed cards issued to customers.
Cards Destroyed	Quantity of cards destroyed in the Spoil Card menu.
Cards Returned to Inventory	Quantity of cards returned in the Spoil Card menu.
Ending Device Inventory	Sum of the above quantities.
Vault Inventory	
Starting Vault Inventory	Quantity of cards in vault since last processed end-of-day.
Removed to Device(s)	Quantity of cards added to devices in Device Access.
Returned from Device(s)	Quantity of cards removed from devices via Device Access and returned to vault.
Current Vault Inventory	Quantity of cards in vault.
Total Cards in Device(s)	Quantity of cards in all devices.
Total Branch Inventory	Sum of cards in devices and vault(s).

If the Ending Device Inventory and/or Total Cards in Device(s) is greater or less than zero, the following window is displayed:

- Click **Yes** to process End-of-Day.
- Click **No** to return to the End-of-Day Report screen.

4.1.1 Tips for balancing end of day reports

- Balance the end-of-day report every day. Never start the day with a device inventory greater or less than zero.
- Do not wait until the end of the business day to spoil cards. Spoil them as soon as they are incorrectly printed. Otherwise, it is easy to lose track of misprinted cards and causes difficulty balancing the end of day report.
- Use the Device Access function to account for added or removed cards even if the device is unlocked manually. Not using Device Access is a guaranteed way to end the day with a negative device inventory.
- The queue should be empty at the end of the day. All cards in the queue should either be printed and verified or deleted.

4.1.2 Spoil cards

A misprinted card that cannot be issued is considered "spoiled." A spoiled card is highlighted in red.

1. Right-click a card in the **End of Day** report:

2. Select **Spoil This Card** to display the following window:

 The "Spoil Card" dialog box is shown. It contains the following fields and controls:

- ID / Card Number:** A dropdown menu showing "5555560004526434".
- Queue ID:** A text box containing the number "2".
- Description:** An empty text box.
- Reason:** An empty text box.
- Operator 1:** A text box containing "Access1".
- Operator 2:** A text box containing "Installer1".
- Return to Inventory:** An unchecked checkbox.
- Card Successful:** An unchecked checkbox.
- Card Destroyed:** An unchecked checkbox.
- Time:** A text box containing "12:29:03".
- Date:** A text box containing "26/06/2018".
- Buttons:** "OK" and "Cancel" buttons at the bottom.
- Footer:** A section labeled "Time and Date Added" with an empty field.

3. Enter a description of the spoiled card and the reason for spoilage. Select from the following options:

Field	Description
Return to Inventory	The card was ejected clean/unencoded and can be used again. Will add 1 back into Vault Inventory.
Card Successful	The card did print, or a card was accidentally printed. Subtracts 1 from Vault Inventory.
Card Destroyed	The card was damaged during printing or was destroyed after printing. Subtracts 1 from Vault Inventory.

4. Click **OK**.

4.1.3 Spoil other

If inventory needs adjusting without the need to spoil a printed card, this can be achieved through selecting **Spoil Other**. Right-click anywhere in the field where printed cards are displayed and select **Spoil Other**. The same process as a regular spoil applies.

- To add a card back to the Vault Inventory, select **Return to Inventory**.
- To subtract a card from the Vault Inventory, select **Card Destroyed**.

4.1.4 Process End of Day for all cardstock associated to the selected branch/vault/device

1. On the **End of Day** window, select the desired **Branch**, **Vault**, and **Device**.
2. Click **Process ALL Card Stock End-of-Day**.

Trism 6 Branch Name: Central Branch: Central User: mike

File Request Queue Reports Inventory Configure Help

Process ALL CardStock End-of-Day

Process Current CardStock End-of-Day Print

3. Select **Print** or **Cancel** on the **Print** window depending on if a paper copy is desired. One prompt is presented for each cardstock processed.
4. After the final **Print** window is resolved, click **OK** on the **Process Completed Successfully** window.

4.2 Management

Reports with user-specified information can be created in the **Management** tab.

1. On the main menu, click **Reports > Management**.
2. Select the **Start Date** and **End Date** to specify a range of cards to display. The **Start Date** should be set one day prior to the date of card verification.

The screenshot shows the Management report interface. At the top, there are fields for Start Date (19/06/2018) and End Date (26/06/2018), both highlighted with red boxes. Below these are four filter dropdown menus. To the right of the filters is a checkbox labeled 'Only Show Processed Transactions' and a 'Clear' button. Below the filters is a 'Search' button, also highlighted with a red box. The main area is a table with columns: Process..., Card Nu..., Offset, ExpDate, Encode..., TranType, WorkSt..., Operato..., CardFor..., Entered..., VaultID, Workst..., DeviceID, and Produ... The table is currently empty. At the bottom left, it says 'Record Count: 0'. At the bottom right, there are 'Save', 'Load', and 'Export' buttons.

3. Click **Search** to populate the list of cards.

4.2.1 Create a customized report

1. Select which columns are printed by right-clicking anywhere in the card information field and selecting **Add/Remove Columns**.
2. Select or clear the boxes to display columns. To change the column order, select a column name and click the up or down arrows.

The screenshot shows the 'Edit Columns' dialog box. It contains a list of columns with checkboxes. The columns are: ArchivedDate, BackgroundID, BranchID, CardFormat, Card Number, Card Mailer, CardStatus, CustomerInfoID, Created, CardRead, DeviceID, Duplicate, ExpDate, EncodedName, EnteredDate, Embosser Name, ID, MailerID, MSRWritten, Offset, OperatorID, PhotoID, Pin Mailer, ProcessDate, ProductID, PVKI, QID, SignatureID, Spoiled, TranType, VaultID, WorkStation, WorkstationIP, MSRWritten1, CardRead1, Duplicate1, Last4, BWPhotoPrint, ColorPhotoPrint, PINSelected, CMailerPrinted, PMailerPrinted, CoreUpdated, ActivatorUpdated, and Uploaded. The 'Save' button at the bottom is highlighted with a red box. There are also up and down arrows on the right side of the list, also highlighted with red boxes.

3. Click **Save** to apply your changes, then click **Search** to apply them.
If this does not change the default column view, select a date range in which transactions were processed.

4.2.2 Filter columns

1. Select a column field from the first **Filter** drop-down menu.
2. Enter the filter criterion in the field below (only one criterion per filter). Filters must match the intended field name exactly.

Note: Only one filter field is initially enabled. The following filters are enabled once preceding filters are designated.

3. Click **Search** to apply the specified filters.

4.2.3 View card details

Right-click a card and select **Details**.

4.2.4 Save a customized report

Click **Save**.

- To save over an existing saved report, click **OverWrite**.
- To save a new report, click **Save AS**.

4.2.5 Export a report to Excel

1. Click **Export**.
2. Enter a filename in the **FileName** field, then click **Browse** to select a location to save the file.
3. Click **OK**.

4.8 Non-Financial

Displays TRISM activity per PC Operator, User ID, TRISM ID, Event, Result, IP Address, Branch, or Computer Name.

1. On the main menu, click **Reports > Non-Financial**.
2. Select a field in the top row of drop-down menus, then select or manually enter search criteria in the drop-down menu below it.
3. Click **Search** to display results.

The screenshot shows the TRISM 6.0 application window. The title bar indicates 'Trism 6.0' and 'Branch Name: Central Branch'. The menu bar includes File, Request, Queue, Reports, Inventory, Configure, and Help. The toolbar contains icons for Log Out, Order Card, RePIN, Queue, End of Day, Vault, Device Access, and Help. The main area displays a search interface with two date pickers (Monday, October 1, 2018 and Friday, November 2, 2018) and several drop-down menus for selecting search criteria. A 'Search' button is present. Below the search area, a table displays the results of the search, showing columns for ID, PC O..., User ID, Tris..., Time, Date, and Event. The table contains 20 rows of data, including events like 'Valid Operator Login', 'Licenses Saved to T-Host!', 'CoreName has been Edited to : Cleartouch', 'OrgId has been Edited to : Premier', 'SearchType has been Edited to : PartyID', 'Configuration Settings Saved', and 'Operator Login Attempt. ID: acces1'.

4.9 Background

On the main menu, click **Reports > Background** to display a list of all background images printed within a specified date range.

4.10 Remove Cardholder Data

Customers may wish to have their data removed from the system, especially in cases of General Data Protection Regulation (GDPR). To remove data from the system, use the Customer Information Section from the database.

To enable this feature, you must access the permissions and select the **Customer Removal** check box. Once this feature is enabled, you can access the Customer Removal Screen to remove specific records from the database.

1. Select **Reports > Remove Cardholder Data**.
2. On the **Customer Removal** screen, you can search for all records or a specific record.
 - To search all records, leave the **Name** field blank and click **Search**
 - To search for a specific name, enter the first, middle, and last name in the **Name** field and click **Search**. Any information that matches the search criteria is displayed.
3. Select the records you wish to remove and click **Delete**. The user information is removed, and the screen is refreshed with a new list of applicable search criteria.

Important: The record of the transaction remains in the database but all information pertaining to the customer is removed. This includes photo information.

Section 05

Inventory

5.1 Device Access

5.1.1 Add/remove cards and change ribbon/foil

Each time a printer or embosser is opened, it must be accounted for in the Device Inventory.

1. On the main menu, click **Inventory > Device Access**, or click .

2. The **Branch**, **Vault**, and **Device** default to whatever values were assigned to the branch. Select other values if necessary.
3. If adding or removing cards, select **Card Stock**.
4. Select **Add** or **Remove**. Selecting **Remove** automatically generates a reason, description, and number of cards.
5. Enter a **Reason** for opening and a **Description** of the actions performed or choose a reason and description from the drop-down menus.
6. Enter the **Number of Cards** to add or remove, if any.
7. Select a time delay for unlocking the device. Longer delays should be used if the device is not near the workstation.
8. Click **Process**.

5.2 Vault Inventory

Vault Inventory shows the number of cards in each vault (central or branch). It also allows you to track shipments of cards between the central vault and a branch vault. A central vault is not required, but at least one branch vault is required. That vault can be shared by multiple branches if necessary (Central Issuance).

5.2.1 Add a vault

- On the main menu, click **Inventory > Vault Access**, or click .
- Click **Add Central** in the Central Vault display or **Add Location** in the Vault display.
- Enter the required name and address fields (optional).
- Click **OK**.

5.2.2 Transfer cards - send cards

- Select a central vault, then click **Send Cards**.
- Select the recipient branch’s vault from the **Send To** drop-down menu.
- Enter the **Carrier Name**, **Number of Cards** to send, and any additional comments.
- Select the type of cards stock to send.
- Click **Send**.

6. The shipment order is displayed under the **In-Transit Carrier** menu.

5.2.4 Low inventory alerts

If TRISM is used for tracking inventory, the TRISM client can be set up for low inventory warnings. These warnings are displayed upon login. Low inventory alerts notify you when the branch vault is running low on card stock. You can set the inventory levels for each individual vault location. Then, in the User Template, you can enable the alerts. When the low inventory levels are set up and enabled, the following warning is displayed:

Note: To set up the low inventory alerts you must have a Dual Control user ready with the same permissions.

1. Log in to TRISM with a user account that has the necessary permissions to access and edit vaults.
2. On the main menu, select  and log in with a Dual Control user when prompted.

3. The Vault information is displayed. Select a Vault location.

4. The Branch information is displayed and the current minimum number of cards remaining before the alert is enabled is displayed in the **Min. Quantity** column.

5. To edit the minimum number of cards remaining before the alert, double-click the card stock name or select the card stock name and click **Edit**.

6. The Edit Stock window is displayed. Enter a number or use the up and down arrows to increase or decrease the **Minimum Number for Alert** and click **Update**.
7. Repeat these steps for each vault and card stock.

Section 06

Per User: Entire System: ☐ Citrix Force

☐ Allow Spoilable and Reprint ☒ Enable Auto Swipe on Repin

☐ DO NOT Show Active Cards in Order Card ☐ Enable Auto Search on Repin

☐ Enable Dual Control on Process End of Day ☐ Enable PSN Increment on Order Card

Field	Description
Days until Password is Expired	Applies only to non-Active Directory users. User passwords are valid for this number of days. Users are prompted to select a new password upon expiration.
Enable Pin Pad Warning on Login	Display warning message that no PIN pad is plugged in to the computer upon TRISM login.
Enable Weak PINS	If checked, weak PINs (1111, 1234, 4321, etc.) are allowed.
Minutes before Lockout	After the specified number of minutes, the user must re-enter login credentials to continue using TRISM. Must be same user that is currently active, otherwise TRISM must be restarted to login as a different user.
Minutes before Red Icon (Down) on Healthbar	Allows you to set a time frame before a System Status turns from green to red on the System Status Window (see 7.8 System Status).
Interface Timeout (in Seconds)	
Pin Pad Derivation Key Location	Numerical location of PIN Pad Derivation Key in HSM Manager.
Pin Pad Session Expiration in days	
Pin Pad Encryption Key Location	
Pin Pad Timeout getting Offset (in secs)	After PIN is entered: if offset is not generated after the specified number of seconds, PIN pad times out.
Update File Location	Where TRISM update files are downloaded.
Citrix	Per User: Select port if assigned per user. Entire System: Select port if assigned for entire system.
Allow Spoilable and Reprint	When the card status is changed to Ready in the Queue, a message box asks if a card has already been printed from the specified request. If yes, another transaction is created that may be spoiled.

Field	Description
DO NOT Show Active Cards In Order Card	If using an interface to find customer information, only the customer's inactive or expired cards will populate in the search results.
Enable Dual Control on Process End of Day	Requires a second admin user for the user to process the End of Day report.
Enable Auto Swipe on Repin	
Enable Auto Search on Repin	
Enable PSN Increment on Order Card	Choose to have the Pa Sequence Number incremented when a card is being ordered.

6.2 Users

The following user configuration is not used when **Active Directory** is enabled, except for the administrative users **access1**, **installer1**, and **installer2**.

On the main menu, click **Configure**. On the side menu, click **Users**.

Field	Descriptions
Print Rights	Print a list of all the selected user’s template permissions.
Print User Template	Print a list of all TRISM users and their corresponding templates.

6.2.1 Add users (without active directory)

- Click **Add**, and enter the user ID, Name, and select a template.
- Click **Save**.

New user password selection

A screenshot of a 'Password Expiration' dialog box. The dialog has a blue title bar with the text 'Password Expiration' and a close button (X) on the right. Inside the dialog, there are two text input fields. The first field is labeled 'New Password:' and the second field is labeled 'Confirm New Password:'. Below these fields is an 'OK' button.

When you log in as a new user, you must use the default password **1234567**. When you click **Login**, a window opens and prompts you to change your password.

Enter the new password in the provided fields and click **OK**. You must then enter your new password in the login screen. All passwords must be at least 8 characters long and include at least three of the following:

- Capital letter
- Lowercase letter
- Number
- Special character (!@#\$%^&*).

Alternatively, users can be entered using the Active Directory function.

6.2.2 Edit users (without active directory)

Select a user and click **Edit**. Make the desired changes and click **Save**.

6.2.3 Delete users (without active directory)

Select a user and click **Delete**.

6.3 Templates

A template can be used to automatically assign a user a specific set of permissions. See [A.1 System requirements](#) for permission descriptions. The administrator template cannot be edited or deleted.

On the main menu, click **Configure**. On the side menu, click **Templates**.

Enable Photo ID	Show Take Photo button in the Order Card screen.

6.4.7 Card Status

The card status for each format is chosen in the **Order Card Job Information** panel. Use the default selection.

To display the card status settings:

- On the main menu, click **Configure**. On the side menu, click **Formats**.
- Select a card type in the list and click **Edit**.
- On the side menu, click **Card Status**.

☒ Use Default Selection

CardStatus

Instant

New

Re-Issue

Replacement

Mail

Add

Edit

Delete

Card Status	Definition
Instant	Activates card and updates offset/exp.date when end user has already added a card record and it is being pulled back into TRISM.
New	Adds skeletal record, activates card, and updates offset/exp.date.
Re-Issue	Updates offset/exp.date.
Replacement	Makes no changes and does not communicate any new data (i.e., just prints a card).
Mail	Used in conjunction with the default statuses (for example, Instant Mail, New Mail, Re-Issue, and Replacement). Adds skeletal card record, updates offset/exp.date, and does not activate card.

6.4.8 Card Class

When there is more than one card class assigned to a BIN, the card class for each format is chosen in the **Order Card Job Information** panel.

To display the card class settings:

1. On the main menu, click **Configure**. On the side menu, click **Formats**.
2. Select a card type in the list and click **Edit**.
3. On the side menu, click **Card Class**.

Adding a Card Class to a BIN:

1. Click **Add** and enter the card class name. Click **OK**.

2. In Windows Explorer, navigate to the BIN template directory. Create a folder with a name that exactly matches the card class name.

3. Add the desired image and xml file to the card class folder. If using different xml files for each image, add all necessary xml files.
4. If another BIN is using the same card class, copy the card class folder and paste it in the other BIN folder. It is important that each card class folder is updated when the contents of one are modified.

4. Enter the printer **Name**, **IP Address**, a **Port** unique to the printer, **Type** (photo printer, embosser), and UNC path of the **Card Mailer** printer (if applicable).
5. Set the **Horizontal** and **Vertical Alignment** fields to **6** (HDPii Plus printers only).
6. Ensure the **Page Height** is **213** and the **Page Width** is **338**.
7. If an embosser is being used, select the desired options in the **Options** area:
 - **Secure Mode**: Enter embosser's data encryption key to encrypt information sent to embosser.
 - **Extended Errors**: View a detailed log of any embosser errors.
 - **Topper**: Check if a foil topping is imprinted on card numbers and names.
 - **Auto Verify**: After a card is printed, it is automatically verified that it has printed correctly. This is recommended when printing large quantities of cards.
 - **Read First**: Not used.
 - **Batch**: Not used.
8. When all required information has been added, click **OK**.

9. Restart Card Printer Service after adding, deleting, or changing a device.

Job Settings for HDP600ii Printer

Additional job settings can be configured for the HDP600ii printer.

- In the TRISM 6 **Devices** window, click **Job Settings**.

- The following form is displayed to adjust the settings for the HDP600ii printer.

Field	Description
Image Transfer Premium Mode	When this option is selected, you can specify the type of card used in the printer. When the Card Type is selected, the Transfer Dwell Time Front , Transfer Dwell Time Back , and Image Transfer Temperature Offset settings are automatically set to the optimum values. If this field is not selected, these settings are not applied.
Transfer Dwell Time Front	Sets the speed at which the card moves through the transfer section in the printer. This setting affects the front of the card transfer speed.
Transfer Dwell Time Back	Sets the speed at which the card moves through the transfer section of the printer. This setting affects the back of the card transfer speed.
Image Transfer Temperature Offset	Sets the temperature of the transfer roller when applying the film to the card.
Dye Sub (YMC) Temperature Offset	Controls the temperature of the print head when printing the Yellow, Magenta, and Cyan panels onto the card. Increase the setting to darken the image and decrease the setting to lighten the image.
Resin (K) Temperature Offset	Controls the temperature of the print head when printing the black resin panel onto the card. Increase the setting to darken the image and decrease the setting to lighten the image.
MultiPass Front	When enabled, a second layer of film is applied to the front of the card. This should not be used if the inhibit panel is being used on the front of the card.
MultiPass Back	When enabled, a second layer of film is applied to the back of the card. This should not be used if the inhibit panel is being used on the back of the card.

Job Settings for DTCii Plus Printer

Additional job settings can be configured for the DTC™ii Plus printer.

- In the TRISM 6 **Devices** window, click **Job Settings**.

Overlay (O) Temperature Offset	Controls the temperature of the print head when applying the overlay material onto the card.

6.6 Active Directory

All users that are part of a network's **Active Directory** can be automatically entered in TRISM. If Active Directory is enabled, usernames and passwords cannot be changed using TRISM 6. The computer in use must be part of a domain, not a workgroup. If the computer is part of a workgroup, do not change any active directory settings.

On the main menu, click **Configure**. On the side menu, click **Active Directory**.

When Active Directory is enabled, the only non-active directory logins that may be used are:

- Access1
 - Installer1
 - Installer2
1. Check **Enable Active Directory**. TRISM 6 automatically searches and enters the domain name.
 2. Click **Get Domain Groups** to display all groups in the Users window.
 3. Select a group in the **Users** window and choose a template from the drop-down menu.
 4. Click **Set** to save the template to the selected domain group.

The domain group selected is displayed in the **Template Group** field.

6.7.3 Add PCs/users/ranges to a branch

The following procedure is used only to add users when **Active Directory** is enabled.

1. Select a branch and click **Edit**.
2. Click **Add** under the **PC's/Users/Ranges** list.

3. Select the method and enter the PC Name, IP Address/Range, or User Name and click **OK**.

6.7.4 Add BINs to a branch

Before adding BINs to a branch, the BINs must be set up. See [6.4 Formats](#).

The following procedure is used only if different branches use different BINs. If all branches use the same BINs, do not add BINs to any branches. When the BINs list is blank, the branch automatically displays all BINs when ordering a card.

1. Select a branch and click **Edit**.
2. Click **Add** under the **BINS** list.

3. Select a BIN and click **OK**.

6.7.5 Branch Add - Quick Add feature

The Quick Add feature adds efficiency for configuring a new device, branch, and vault.

Note: Using this feature assumes the printer has been installed on the server.

1. Log in to TRISM using the User ID for the administrator level.
2. On the main menu, click **Configure**. On the side menu, click **Branches**. Click **Quick Add**.

3. Enter a **Branch Name** and click **OK**.

The branch name is added. In addition, a vault and device with similar names are added to the branch.

4. Click **OK**.
5. On the **Configuration** screen, click **Devices**. A new printer was added with the name you created in step 3. Select the device and click **Edit**.
6. Edit the following fields to configure the printer:
 Name: The name exactly as it is displayed in Devices and Printers.
 IP Address: IP of the installed printer.
 Port: Any number. This setting is not used, but must be filled in.
 Type: Type of printer.
 Print Service IP: IP address of where the printer is installed, and the Card Printer Service is running.
 Photo Settings: Set both the **Horizontal** and **Vertical Alignment** to **6**.
 Click **OK** and restart **Card Printer Service**.
7. A matching vault was created with card stock added in step 3. If new card stock is created, that stock is automatically added to each vault.
8. On the **Configuration** screen, click **CardStock** > **CardStock to Vault/Device**.

9. From the **Select Vault** list, select the new vault.

10. Select the **Card Stock**, **Device**, **Hopper**, and **State**. Click **Add**.

6.14 Crystal Reports licensing

Crystal Reports version 13.026 requires a license agreement to be accepted if using Citrix/remote environments. TRISM Client 6.2 and above detects if the Client is launched in a remote session and disables Crystal Reports from being used if the license acceptance has not been checked. Card production can still occur but when Crystal Reports is called to print a report, a message is displayed stating Crystal Reports is not licensed.

To enable the license agreement, select **Configure > Crystal Reports** and select **Enable**.

By default, this setting is disabled in all User Templates. If the financial institution does not log in with Access1, then the setting must be enabled in a User Template to show the settings, then disabled to remove it.

To enable the setting, select **Configure > Template**, select the template and click **Edit**.

Select **Crystal Reports Editing** and click **OK**.

The financial institution should then log into TRISM with a user on the edited template to enable the setting.

Card Printer Service	6.0.6.64	26/06/2018 08:32:44	27/06/2018 06:36:39	Ready

- Green:** status table in database is running.
- Red:** status table has not been updated for the number of minutes specified by the **Configure > General > Minutes before Red Icon (Down) on HealthBar** option (see page [6.1 General](#)).

Appendix **A**

Reference

A.1 System requirements

A typical TRISM installation consists of a server or virtual machine (Host) and one or more workstations. A dedicated server or VM is strongly recommended to prevent network downtime, as aspects of installation, setup, configuration, and updates may require system reboots. The server must be provided by the financial institution. The hardware and software requirements for TRISM installations are listed in the following table.

	Server (Host)	Workstation (Client)
Minimum processor speed	2.0 GHz	2.0 GHz
Minimum available RAM	16 GB	4 GB
Available hard disk space	50 GB	10 GB
Video resolution	SVGA (1024 × 768)	SVGA (1024 × 768)
Operating system	Microsoft Windows Server 2012 R2, 2016, 2019, 2022	Windows 8/8.1, 10, 11
Database software	SQL Server 2016 (SP2), 2017, 2019, Standard, Express, or Enterprise Edition	N/A

Note:

- A dedicated server and SQL instance is strongly recommended on the server. High volumes of printers, mixed printer environments or embossers may require a separate printer server.
- It is recommended to use the Standard or Enterprise edition of SQL Server in a system containing 25 or more branches.

A.2 Card layouts

Refer to the following guidelines when setting up card formats.

Card Layouts	
Card size	3 3/8" x 2 1/8"
Bleed	1/8" optimal; 3/32" minimum
Clearance	Text/logos at least 3/32" from edge of card, brand marks, magnetic stripe, EMV chip, or signature panel
Visa Specifications	
Visa brand mark	9.75 mm x 20.5 mm
Distance from right of brand mark to right edge of card	2 mm
Distance from bottom of brand mark to bottom edge of card	2 mm
MasterCard Specifications	
MasterCard brand mark	11.3 mm x 19.25 mm
Distance from right of brand mark to right edge of card	2 mm
Distance from bottom of brand mark to bottom edge of card	3 mm
Custom Images	
Image file type	.jpeg, .bmp
Aspect ratio	3:2
Minimum resolution	1015 x 640

A.3 Custom image guidelines

Your financial institution reserves the right to determine, in its sole discretion, whether a submitted image will be accepted or rejected. All images submitted must have the consent of the owner including those images downloaded from the internet.

Any images that contain the following items are not accepted:

- Company names, logos, slogans, third party brands, trademarks, copyrighted items, or any image which may be protected by trademark or copyright.
- Professional athletes, politicians, celebrities, public figures (excluding permission-based photos of you, your family members, or friends photographed with a famous person).
- Depictions of illegal activities or otherwise inappropriate behavior.
- Addresses, phone numbers, social security numbers or other personal identification numbers, URL addresses.
- Items that may be considered obscene, offensive, indecent, provocative, nude, semi-nude, lewd, or otherwise inappropriate images, including profanity.
- Political affiliations or other socially sensitive images.
- Racially sensitive material.
- Artwork which was created by a third party for which you have not obtained permission from the owner to use.
- Cartoon or other characters for which express permissions have not been obtained. This includes images that you have not created and do not have permission to use.
- Any other image which is deemed unacceptable and reflects negatively on the branding message of your financial institution.

A.4 Permission descriptions

A.4.1 Security

Permission	Description
Template Security Level	Determines if you can reset a user's password when you have the Add User permission or locks the account if you have the Edit User permission.
Edit Security Template (Add/Edit/Delete)	Allows you to add, edit, or delete templates.
Edit Security Permissions	Allows you to edit a template. This is specifically for modifying the templates without having the ability to add or remove the templates.
View All Branches	Allows you to access all branches even if the system is configured to only show your branch. This is useful for users who float.
Log into Thost	Allows you to log in to the T-Host server.
License File	Allows you to see the License Section and allows you to add/update the licenses with the supplied file.
Reset Other User Passwords	Allows you to reset other user's passwords. Note: This does not apply to systems configured with Active Directory.

A.4.2 Order cards

Permission	Description
View Order Card	Allows you to access the Order Card option from the Request menu on the main tool bar and to access the Order Card button on the quick launch tool bar.
View Actions	Allows you to access the Request menu on the main tool bar.
Edit Permissions	Allows you to access the Request > Edit Permissions option on the main tool bar.
RePIN a Card	With PIN Verification: Allows you to see the Request > Re-PIN option. Override: No longer used. Enforce Card: Allows you to see the Re-PIN screen. Card must be swiped to re-PIN. Re-PIN is not possible if card is not present.
Order Card Express	Order Card screen opens automatically upon login.
PIN Mailer Only	Allows you to access the Request > PIN Mailer option on the main tool bar.
Print Transactional Report	Allows you to access the Transactional Print screen when you successfully order a card. The Transactional Report is a sign off sheet the customer signs to state they had a card made. Many financial institutions do not use this or have their own.
Hide Customer Info on Transactional Report	Allows you to access the Print Transactional Report option to mask the customer data on the report. This is for security.
Force Masked Card Number on Trans Report	Allows you to access the Print Transactional Report option to mask the card number on the report.
Read a Card	Allows you to access the Request > Read a Card option on the main tool bar.
CVV2 Calculator	Allows you to access the Request > CVV2 Calculator option on the main tool bar.
Auto Select First Card Status	Allows you to have the Card Status in Order Card to automatically be populated with the first option. This is for improved automation.

A.4.3 Queue

Permission	Description
View Queue	Allows you to access the Queue menu on the main tool bar and to access the Queue button on the quick launch tool bar.
Edit Card	Allows you to edit card records in the Queue.
Delete Cards	Allows you to delete card records in the Queue.
Delete from any Branch	Allows you to delete cards from other branches and requires you to have the View All Branches permission.
Purge Queue Requests	Allows you to access the Purge Queue Request button on the quick launch tool bar to delete all pending queue requests. This is used to troubleshoot systems that have a lot of traffic in the queue.

A.4.4 Reports

Permission	Description
View Reports	Allows you to access the Reports menu from the main tool bar and the Reports button on the quick launch tool bar.

Permission	Description
View Local Reports	Allows you to see the predefined reports as well as custom reports that have been saved.
Run End of Day Reports	Allows you to access the End of Day option in the Reports menu of the main tool bar and the End of Day button on the quick launch tool bar.
Use Classic View	Allows you to view the End of Day report in the classic format. This is the default view.
Run End of Day Reports	User: Allows you to run the End of Day report in user mode. This report displays individual branch options only. Admin: Allows you to run the End of Day report in Admin mode which shows all branches and formats.
Show Mask Card Number	Shows masked card numbers through the entire TRISM system. This does not include some logs that have this data.
Force EOD Masked Card Number	Allows you to have all card numbers on the end of day report masked. This is for security.
View Non-Financial Reports	Allows you to have access to the Non-Financial report in the Reports menu of the main tool bar.
View Individual Reports	Allows you to access the Management Reports Section that allows you to save/load reports created by the financial institution.
View Existing Reports	Allows you to see the Historical Card Balance Report in the Reports menu of the main tool bar.
Print Reports	Allows you to print reports.
Data Log	Allows you to access the Data Log option in the Help menu of the main tool bar.
Error Log	Allows you to access the Error Log option in the Help menu of the main tool bar.
Client Information	Allows you to access the Client Information option in the Help menu of the main tool bar.
Device Access	Allows you to access the Device Access report in the Reports menu of the main tool bar.
Vault Supply	Allows you to access the Vault Supply Tracking report in the Reports menu of the main tool bar.
Device Error	Allows you to access the Device Error report in the Reports menu of the main tool bar.
Spoiled Card	Allows you to access the Spoiled Card report in the Reports menu of the main tool bar.
Spoiled Card For all Branches	Allows you to access the Spoiled Card report with all branches available in the Reports menu of the main tool bar.
Branch Activity	Allows you to access the Branch Activity report in the Reports menu of the main tool bar.
Device Access Report (CardStock)	Allows you to access the Device Access report in the Reports menu of the main tool bar.
Background	Allows you to have access to the Background report in the Reports menu of the main tool bar.
Same PINS	Allows you to have access to the Same PINS report in the Reports menu of the main tool bar.
Different PINS	Allows you to have access to the Different PINS report in the Reports menu of the main tool bar.
Historical Transfers	Allows you to have access to the Historical Transfers report in the Reports menu of the main tool bar.
Historical Vault	Allows you to have access to the Historical Vault report in the Reports menu of the main tool bar.
Historical Central Vault	Allows you to have access to the Historical Central Vault report in the Reports menu of the main tool bar.
Customer Removal	Allows you to have access to the Customer Removal tool in the Reports menu of the main tool bar.

A.4.5 Inventory

Permission	Description
View Inventory	Allows you to access the Inventory menu of the main tool bar.
Device Unlock	Allows you to access the Device Unlock function (card add and removal) in the Inventory menu of the main tool bar.
View Card Stock	No longer used.
View Vault Inventory	Allows you to access the Inventory > Vault Inventory option in the main tool bar. Central View: Allows you to access the left side of the Vaults which contain all the Central Vaults in the Vault Inventory screen. • Central Admin: Allows you to access the CardStock options (add/edit/remove) and allows you to Send Transfers. This also allows you to add more Central Vaults. • Central User: Allows you to have access to Central Branch Transfers in the transfers section of the Vault Inventory screen. Branch View: Allows you to view the right side of the Vaults which contain Branch Level Vaults in the Vault Inventory screen.

A.4.6 Configure

Permission	Description
View Settings	Allows the user to access the Configure option on the main tool bar
User Editing	Add User: Allows you to access the Add User button in the User section of the Configuration screen. Edit User: Allows you to access the Edit User button in the User section of the Configuration screen. Delete User: Allows you to access the Delete User button in the User section of the Configuration screen.
Card Stock	Add: Allows you to add cardstock to vaults in the Vault Inventory screen. Delete: Allows you to delete cardstock to vaults in the Vault Inventory screen. Edit: Allows you to edit cardstock to vaults in the Vault Inventory screen. Rename: No longer used. Process: No longer in used.
General Edit	Allows you access to the General option on the left side of the Configuration screen.
User Editing	Allows you access to the Users option on the left side of the Configuration screen.
Template Editing	Allows you access to the Templates option on the left side of the Configuration screen.
Format Editing	Allows you access to the Formats option on the left side of the Configuration screen.
Device Editing	Allows you access to the Devices option on the left side of the Configuration screen.
Active Directory Edit	Allows you access to the Active Directory option on the left side of the Configuration screen.
Interface Editing	Allows you access to the Interfaces option on the left side of the Configuration screen.
MSR Editing	Allows you access to the MSR option on the left side of the Configuration screen.
CardStock Editing	Allows you access to the CardStock option on the left side of the Configuration screen.

Permission	Description
Branch Editing	Allows you access to the Branches option on the left side of the Configuration screen. Add: Allows you to add branches in the Branch section of the Configuration screen. Edit: Allows you to edit branches in the Branch section of the Configuration screen. Delete: Allows you to delete branches in the Branch section of the Configuration screen.
Printers	Add: Allows you to add printers in the Devices section of the Configuration screen. Edit: Allows you to edit printers in the Devices section of the Configuration screen. Remove: Allows you to remove printers in the Devices section of the Configuration screen.
Formats	Add: Allows you to add formats in the Formats section of the Configuration screen. Edit: Allows you to edit formats in the Formats section of the Configuration screen. Remove: Allows you to remove formats in the Formats section of the Configuration screen.
Show Healthbar	Allows you to see the red/green status lights in the main tool bar.
Show System Status Table	Allows you to access the Help > System Status option of the main tool bar.

Appendix **B**

TRISM Monitor Service

B.1 Introduction

The TRISM Monitor Service is designed to be the “heartbeat” of the HID service modules. This service sends notification emails when TRISM modules, such as HSM cores or interface services, become unresponsive.

TRISM Monitor monitors the communication between the individual HID Service Modules and the SQL Database. This gives you peace of mind knowing that if a HID-Level service stops working, an email defining the current state of all HID services is delivered.

The logic implemented polls the SQL database every minute for service activity. If there has been no response from any service during a specified time, an email is generated letting the user-specified recipient know that there has been a change to the services status. The monitoring time is configurable to meet each unique environment's needs via the TRISM Client Interface settings option.

The easy-to-setup email template uses an efficient format, which allows for a quick determination of what monitored services are up and what services may be down. Every time a change in service has been identified by TRISM Monitor, the email content shows the current status of all services, so no guesswork is required.

```
TRISM Module Status:  
HID Card Printer Service 4.0 - UP HID Calculation Service - DOWN Core1 - DOWN  
Core2 - DOWN  
Card Service - DOWN
```

B.2 HID TRISM Monitor service configuration

To configure the HID TRISM Monitor service you will need to know the following information:

- Host address: example – smtp.gmail.com
- Host Port: example - 123
- Password: example – password123456
- Username: example – TrismTestingEmail@gmail.com

B.3 Settings

Installing and starting the service adds several settings in the **Configure > Interfaces > Interface Settings > Interface** drop-down menu > **HID TRISM Monitor**:

Interface setting	Description
EmailHostAddress	The hostname or IP address of the server used to send email.
EmailHostPort	The port on which the email server is listening.
Email Password	The password for the email account used to send email.
EnableSSL	Enables Secure Sockets Layer (SSL) connections.
Email Username	The username of the email account used to send email.
SenderName	The sender's name to be displayed in all outgoing email.
SenderAddress	The sender's email address to be displayed in all outgoing email.
Recipients	The recipient's email addresses (separate multiple addresses with commas).
Monitor "Service Name"	Enables monitoring of the selected Service Module.
Monitor "Core 1"	Enables monitoring of the selected HSM Core Module.
AlertAfterMinutesDown	Sets how long to wait before sending an email once an unresponsive service is detected. Default 10 minutes. Minimum value = 1 (minute), maximum value = 60.

Revision history

Date	Description	Revision
July 2025	Adds updates to software version 6.x.	C.2
June 2024	Reverts this document to cover TRISM 6.x. For TRISM 7.x, see <i>HID TRISM Financial Instant Issuance User Guide</i> (PLT-07642).	C.1
May 2023	Updated for version 7.0	C.0
July 2022	Updated system requirements.	B.5
December 2020	Added subsections in Section 6 for job settings.	B.4
September 2020	Added subsections in Section 6 for Regions and Section 7 for Device Information. Updated system requirements.	B.3
April 2020	Updated note in Section 2 to specify Verifone and P200 PIN pad functionality.	B.2
April 2019	Updated for HSM XT.	B.1
November 2018	Updated for version 6.0.	B.0
September 2017	Initial release.	A.0
