

HID Mobile Access: The Wallet Experience

Quick. Convenient. Secure.

Simplify the way employees access what they need to power their workday.

The HID Mobile Access wallet experience lets employees and tenants use HID credentials in their mobile wallet to access spaces and networks — from doors and elevators to workstations and printers. Just hold a mobile device near the reader to unlock. **See how employees can access anything they need for work.**

Work Areas

From offices to conference rooms to VIP lounges, provide access granularly — so the right person has the right access at the right time.

Elevators

Access elevators and specific floors without worrying about lost cards or forgotten PINs.

Printers

Protect sensitive documents by ensuring they're released only when the user's digital wallet credential is presented.

EV Charging Stations

Unlock secured EV charging stations, making it even easier for users to go green.

Attendance Management

Employees can easily tap in and out to track time and attendance as required.

Parking

Extend the building's security perimeter to the areas where employees park their vehicles.

Front Doors

Unlock building doors with just a tap of a mobile device, without unlocking the device or opening any apps.

Turnstiles

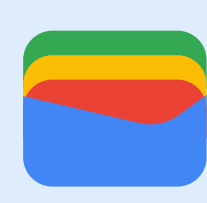

Authorized employees flow through turnstiles without congesting lobbies, thanks to the fast read speed.

Laptops and Workstations

Skip complicated passwords to log in at hot desks or while working remotely. Users can unlock access to laptops, networks and workstations simply and securely.

With HID, you enjoy the confidence of working with a leader. **We have the process, programs and partners to ensure your custom solution is implemented perfectly.**
