

# HID Authentication & Verification Product Family for Healthcare

HID offers a broad portfolio of identity authentication and verification technologies including ID document reading, RFID and biometric solutions. These innovations streamline workflows, secure healthcare environments, facilitate compliance and enhance the patient experience.

Customers can select from a wide variety of form factors, security features, industry certifications and materials based on their use case requirements. Our product lineup ensures that whatever the need, we have a solution to meet it. Explore how HID's technologies are shaping the future of healthcare!

## KEY BENEFITS

| RFID                                                                              |                                                                                   | Biometrics                                                                                  |                                                                                                            | ID Document Reading                                                                                  |

| OMNYKEY® 5022                                                                     | OMNYKEY 5427CK                                                                    | EikonTouch™ TC710                                                                           | U.ARE.U™ Camera                                                                                            | ATOM™                                                                                                |
|  |  |            |                          |                   |
| Contactless high frequency smart card reader                                      | Dual frequency reader that supports mobile access                                 | Capacitive silicon USB fingerprint reader with enhanced usability and FBI PIV certification | AI edge camera that delivers top-performing face recognition for identification and verification use cases | Full-page ID scanner, document imager and electronic machine readable travel document (eMRTD) reader |

- Compatible with a wide range of healthcare software and systems, seamlessly integrating without disrupting existing technologies
  - Integrates with current access control systems and access privilege databases for faster deployment
  - Simplifies and protects clinician access, ideal for shared workstations
- Streamlines clinician workflows
  - Delivers a secure, convenient and non-disruptive user experience
  - Ensures seamless accountability with audit trails for compliance
  - Mitigates medical and insurance fraud

## KEY USE CASES

| Patient Identification                                                             |                                                                                     | Clinician & Staff Authentication                                                    |                                                                                     |                                                                                      |                                                                                       |
