

HID® SAFE™ Enterprise:

Securing the future

Reduce the costs and risks when managing the physical access of your employees, contractors, and visitors.

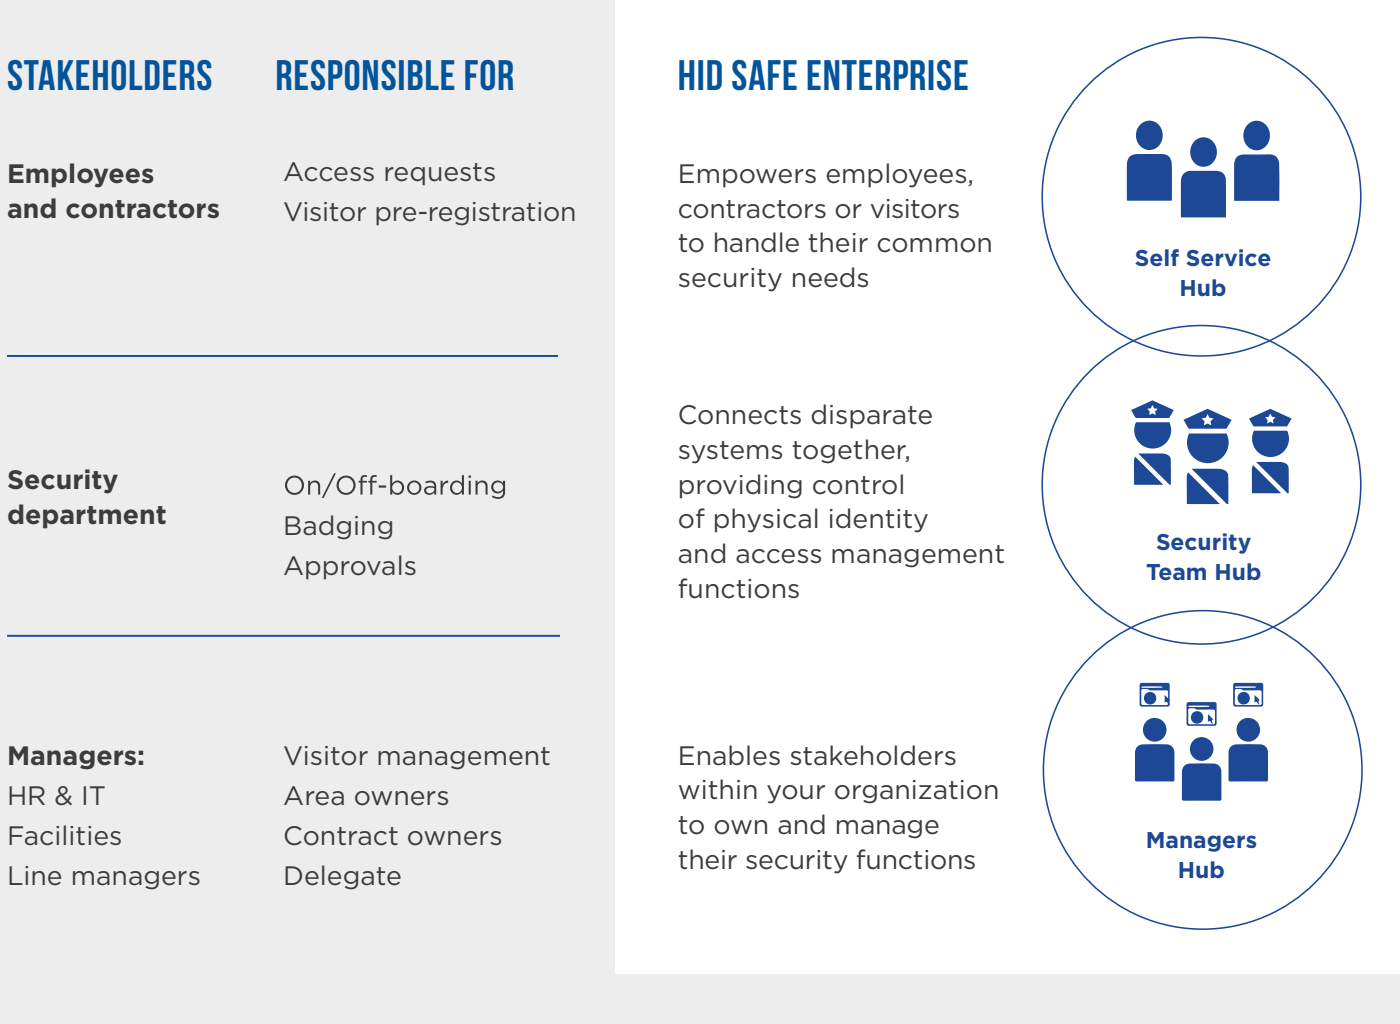

HID SAFE Enterprise, is a web-based solution that helps organizations manage identities—employees, contractors, and visitors—and their access to physical spaces. The solution solves key identity management challenges organizations face, like onboarding and badging, visitor management, access management, and compliance.

HID SAFE Enterprise features:

- Advanced Access Manager** streamlines the management of an organization's employees, contractors, and tenant identities.
- Visitor Manager** handles the entire visitor life cycle from pre-registration and visitor invitations to rapid check-in and checkout.
- Badge Manager** allows users to design, create and print employee, contractor and visitor badges (and request new or temporary badges when needed).
- Security Reporter and Operations Analytics** assemble comprehensive reports combining ID statuses, activity monitoring, diagnostics, and compliance.

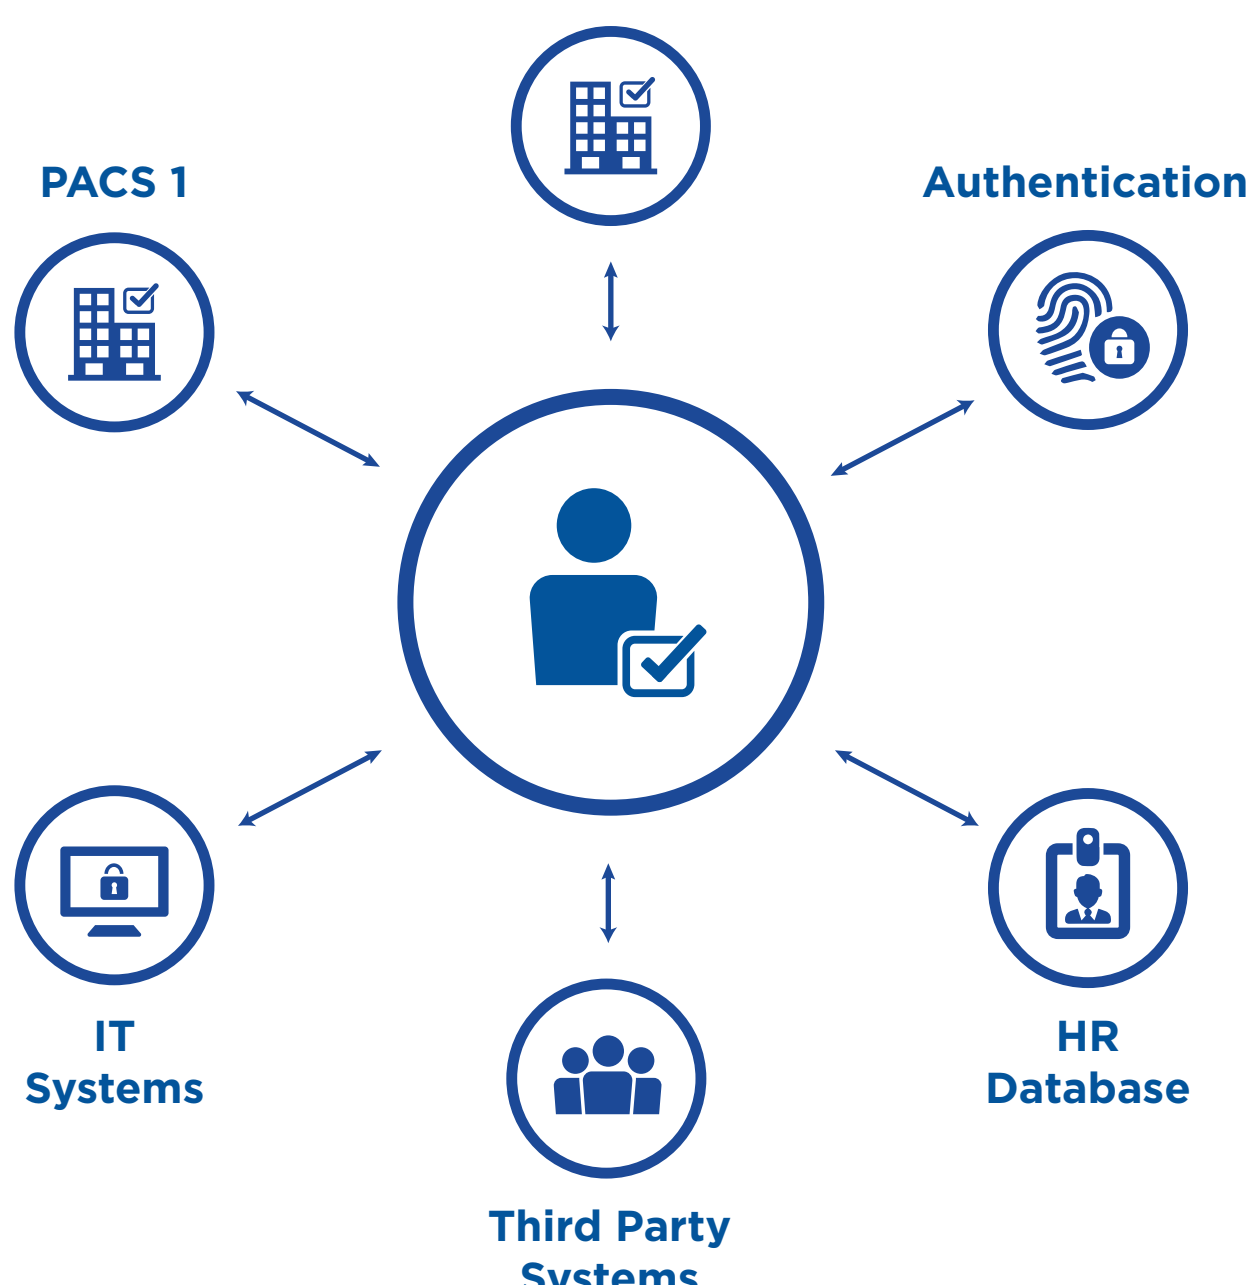

Stakeholder alignment

HID SAFE Enterprise **breaks down traditional organizational silos to streamline the role of stakeholders involved in identity management.** These include employees and contractors, as well as process managers in HR, IT, Facilities, Reception and Contractor Administration.

Complete security across the organization

Unlike traditional identity management solutions or physical access control systems (PACS), **HID SAFE Enterprise integrates with logical security systems to standardize the on/off-boarding of identities** and their physical access across multiple and disparate physical security systems.

Benefits

HID SAFE Enterprise automates key processes and simplifies control of all identities—employees, contractors, vendors and visitors—across an organization to ensure each identity has the right access, to the right areas, for the right length of time.

- Reduce operating costs by automating identity/access management
- Centralize physical access control of all identities across disparate physical access control systems (PACS)
- Minimize risk around manually enforcing provisioning policies
- Reduce delays in on/off-boarding identities and their physical access in PACS
- Demonstrate compliance with regulations such as Sarbanes-Oxley
- Gain useful analytics and reporting with regular updates

Industries

HID SAFE Enterprise is designed to streamline physical identity and access management across a host of industries including:

- Aviation
- Energy
- Financial
- Government
- Healthcare
- Oil and Gas
- Technology

Goodbye manual processes, hello automation

HID SAFE Enterprise **automates manual, error-prone onboarding processes** by using existing infrastructure to standardize security policies across the organization. The result? **Full compliance with regulations**, significant operational **cost savings**, and **tighter security** for the organization across all departments.

Read more about HID SAFE Enterprise and how organizations can take a more intelligent approach to security in our eBook, **Securing the Future with Physical Identity and Access Management.**
