

HID SAFE

Physical Identity and Access Management
for the Enterprise

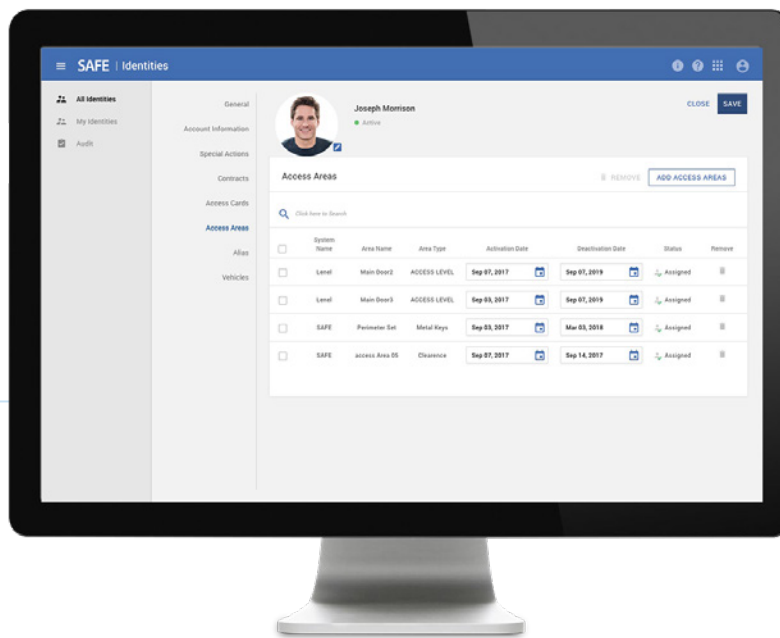

Control Who Accesses What Places, When, and for How Long. Know Who Authorized Access and Why.

HID SAFE makes physical security compliance easier for distributed enterprises. Security teams can synchronize identity management and physical access controls globally for employees and extended identities, like visitors and contractors. HID SAFE enables the automation of internal policy enforcement, from workflow initiation through approval to issuance, by integrating business, physical and IT systems.

ENTERPRISE VALUE

- Enforce company-wide, site-specific, or role-based policies automatically
- Reduce the time spent creating reports and documentation proving compliance
- Reduce the time and effort onboarding and managing identity and physical access processes
- Improve productivity and streamline the joiner, mover and leaver experiences for employees, visitors, partners and contractors by cutting long processing times when they request initial or updated access
- Reduce error incidence from manual data entry, which can lead to delayed processes or re-work, or improper offboarding
- Avoid rip-and-replace scenarios by integrating into existing access control, IT, HR and identity systems
- Reduce risk by centralizing policy and entitlement creation and enforcement as well as monitoring for excessive privileges and improper usage

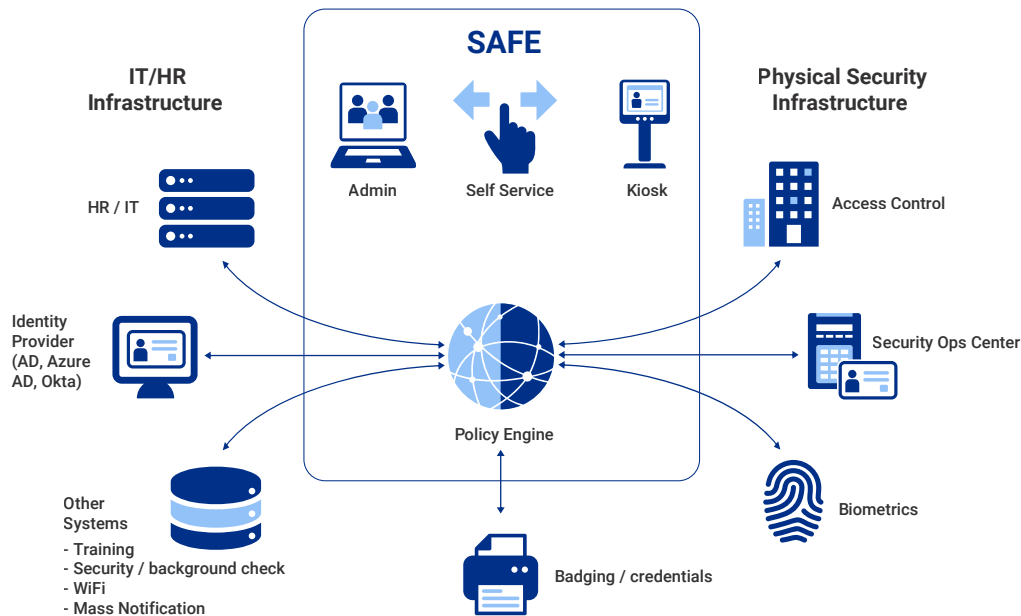

A Comprehensive Set of Capabilities

- Utilizes predefined rules and workflows for on/offboarding of identities, access provisioning/de-provisioning and access change management
- Allows users to manage various details of a physical identity including access card information, biographic and biometric details, results of security checks and logs of historical access usage
- Allows users to create spatial hierarchy of locations (sites), the underlying buildings, floors and associated areas for better access management
- Provides a central location to search and assign access levels for an identity across disparate physical access control systems (PACS) and specify details such as time schedule of access (24x7, business hours)
- Enables employees to make multiple physical security requests, such as new physical access requests and badge requests, using a self-service portal
- Aggregates access level information from disparate PACS and allows users to manage other details typically not available in PACS, such as risk level, area owner, multiple approvers and access prerequisites
- Allows creation of access profiles, which automates assigning physical access using common identity attributes such as role, location and department
- Allows authorized personnel to terminate physical access of identities immediately, using urgent termination
- Maintains a complete audit trail of all transactions executed within SAFE and between it and external systems
- Delivers predefined reports based on access records and logs of identities for compliance reporting and security planning

Seamlessly Enforce Physical Security Policy

As a modern, web-based solution, integration of key infrastructure into HID SAFE streamlines and centralizes the physical access lifecycle.

Key Modules

IDENTITY MANAGER

Control and centralize policies for managing the entire lifecycle of employees, visitors, partners, vendors, and contractors with automated workflows into and from other identity and HR systems.

BADGE MANAGER

Provide a platform to capture data from external identity sources and preload identity information prior to printing a badge. Customers have the ability to design, create and print employee badges. The platform also allows individuals to request temporary and new badges.

ACCESS MANAGER

Streamline the central management of the physical access lifecycle for employees, contractors and tenants. Delegated access allows key stakeholders to use administrative functions such as onboarding, document gathering and processing approvals. The self-service portal enables individuals to request access and maintain their profiles.

VISITOR MANAGER

Manage the entire visitor lifecycle quickly and securely — from easy preregistration to welcoming visitor invitations through rapid check-in and check-out.

CREDENTIAL MANAGER

Monitor and manage the processes and workflows for granting and updating credentials based on policies, documentation, training, endorsements and security checks.

ASSET MANAGER

Assign or approve self-service requests for assets, like metal or electronic keys, parking spaces, mobile devices or other physical items needed for personnel to complete a task or their job. Assets can be tracked from request to return.

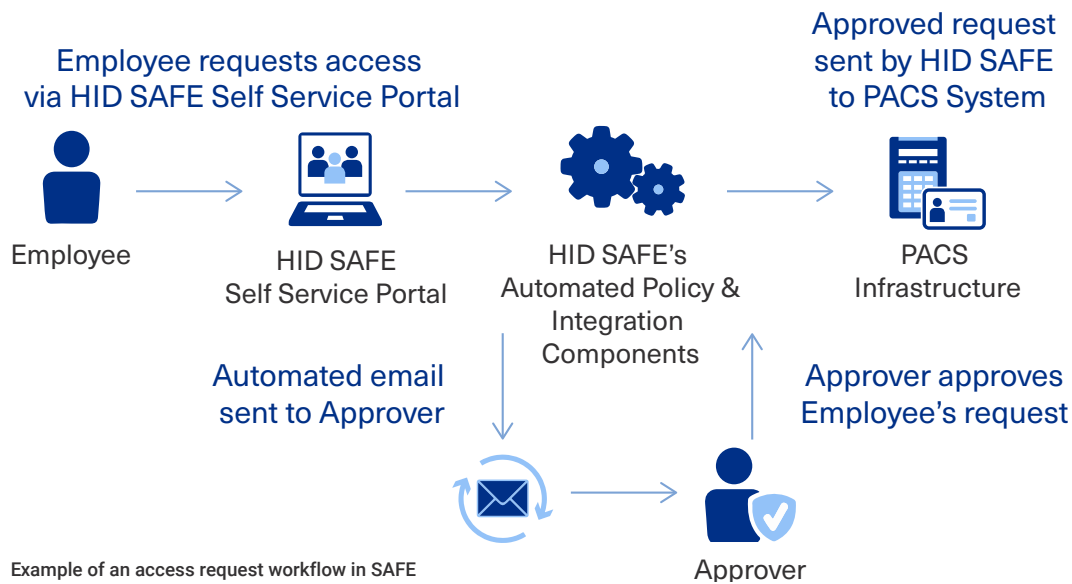

SECURITY REPORTER

Assemble a comprehensive set of reports that assist in analyzing and managing all of the activities involved with onboarding and badging, access management and visitor management. Reports include status, activity monitoring, diagnostics and compliance.

SAFE ANALYTICS

Minimize insider threats and help protect high-risk areas with security intelligence dashboards and reports. SAFE uses real-time machine learning to collect and correlate physical identity data, providing you with actionable security insights and reports.

How SAFE Helps With Compliance

SAFE maintains a complete record of requests, changes, additions, deletions and decisions. Who, what, where and why reports provide visibility into who is granted access, where, why, for how long and who authorized it, including all elements of identities, access, permissions, etc. that SAFE uses to govern the physical domain.

PIAM and Visitor Management Products Along With SAFE:

- SAFE Visitor Manager (standalone)
- WorkforceID™ Visitor Manager
- EasyLobby®

HID Ecosystem

SAFE has many valuable integrations and connections with other HID and ASSA ABLOY products.

BADGING

FARGO® Connect | FARGO HDP | FARGO DTC | Asure ID™

CREDENTIALS

Crescendo® | SEOS® | iclass® | Origo™

ASSA ABLOY

ASSA CLIQ™ | Traka
