

SEOS™ POWERING MOBILE ACCESS

Seos™ is the world's first commercial ecosystem for issuing, delivering and revoking digital keys on NFC-enabled smartphones.

NFC-enabled smartphones with Seos can be used to open the doors of commercial and office buildings, manufacturing facilities, hospitals and universities, as well as homes and hotels.

Seos is designed for mobile access control. A user friendly app lets you open doors by simply presenting the phone to a Seos-enabled reader or lock. With support for multiple digital keys simultaneously, users can configure each digital key to be always active or to require manual activation.

Seos uses standards-based smart card technology to provide a high degree of security and privacy. By enabling a single point of entry to multiple global communication networks, integration into access control systems is flexible and easy.
