

Staff Safety Solution

Deliver real-time safety to staff in hospitals and long-term healthcare facilities.

CHALLENGES

Verbal and physical assaults on nurses and other healthcare staff is unfortunately commonplace. 76 percent of all nurses experience verbal and/or physical violence, while 75 percent of 25,000 workplace assaults reported annually occur in healthcare settings. Many healthcare institutions have violence prevention programs in place; however, such programs are often not effective enough against threats when they occur.

SOLUTION

The GuardRFID® Staff Safety solution delivers an advanced, real-time duress call system to protect healthcare workers. It is an enterprise grade solution that may be installed on a centralized server to support staff at different locations. This enables staff members to move from one location to another without reprogramming their badge or requiring additional data entry. The solution includes our small and lightweight wearable RFID tags with user-activated push buttons—this allows employees to be located quickly and to summon help when needed. Centralized monitoring makes it easy to find staff during emergencies so that help can be immediately sent to where it's called for, and any escalations in violence can be prevented.

HOW IT WORKS

Staff members are assigned an active RFID tag with call button support—this can be attached to a lanyard. The tags communicate with the GuardRFID infrastructure in real-time to facilitate staff location and alerts in the AllGuard® software if the tag call button is pressed. When the alarm is received in real-time, the software can be configured to generate various responses, including sending notifications to authorized personnel (for example, security guards) or triggering an audible alarm to help diffuse the situation.

GuardRFID's **Staff Safety Solution** allows you to respond in real-time and provide staff protection.

*Ensure the **safety and wellbeing** of your healthcare workers with the most advanced real-time duress call system.*

Staff Safety Solution

SOLUTION BENEFITS

- Lower operational costs by preventing staff injury while providing a safe environment for workers to thrive within.
- Improve patient care by ensuring staff are comfortable and confident in their work environment.
- Enterprise-class system that centrally monitors staff in multiple locations and allows staff to easily transfer between facilities.
- Strongest immunity to wireless interference with zero impact on or from Wi-Fi networks, and the reduced risk of missed alarms often associated with infrared and other competing solutions.
- Integrate with existing hospital systems to ensure your staff safety is part of your larger facility strategy.
- Staff tags offer two programmable tag buttons and audible response capability.

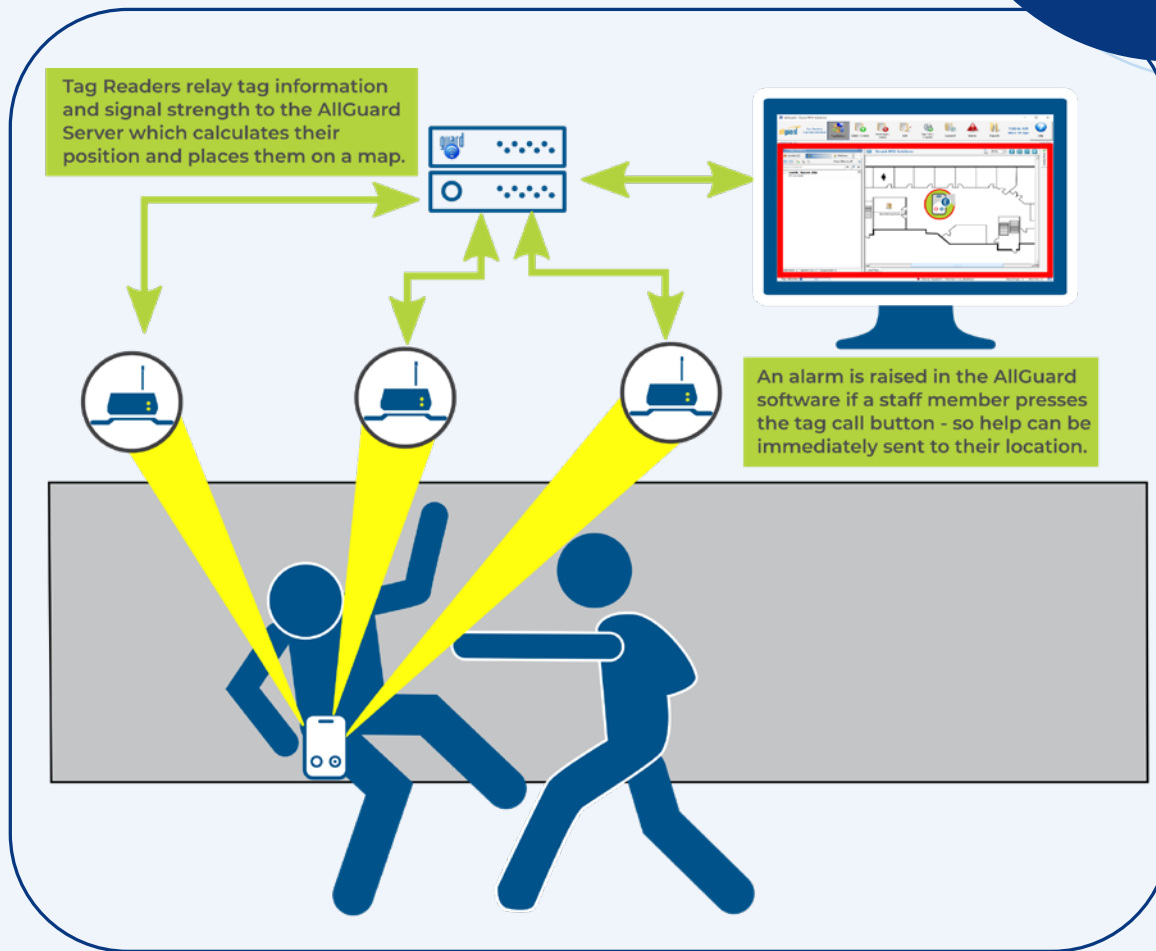

ISSUES & CHALLENGES

In British Columbia, a **nurse is more likely to encounter violence** on the job than a police officer

75% of 25,000 reported workplace assaults repoted annually occur in healthcare settings

76% of all nurses experience verbal and/or physical violence on the job
