Add vital protection and durability to your ID card solution at a fraction of the cost and lead time of a custom holographic solution. HID Global's stock holographic education design incorporates several Visual Security Elements (VSEs) into an elegant and versatile design that is ideal for K-12, community colleges, or universities.

Visual Security Elements (VSEs)

Education Stock Holographic Overlamine

1. Fine Line Design (Guilloche)

Guilloche fine lines give the illusion of motion as the card is rotated. These fine lines can easily be verified by the naked eye with a simple turn of the card.

2. 3D Embossed Effect

This feature creates the illusion of height. The diploma will appear to be positioned above the front surface of the card.

3. Micro Text

Embedded inside the design of the book, this 0.008 inch tall text is likely to go unrecognized without knowing that it is there.

4. Nano Text

At only 0.004 inches in height, the words "VALID SECURE" will only be visible when viewed under high-powered magnification. The words "VALID SECURE" will continuously repeat across the entire overlamine.

5. Hidden Text

Adding an additional layer of security and sophistication, this covert feature requires a laser to view. Shining a laser at the area indicated in purple will create a reflection of the letters "OK".

6. Black/White Image

The book will switch between the color black and the color white as the card is rotated side-to-side, adding an easy visual verification of the validity of the ID.

7. 2D/3D Background Images

The book, cap and monument will appear to float behind the other holographic elements in the design, creating a sense of 3D depth.
