

Unleash the Power of a Single Credential

with the HID Crescendo® family of FIDO-enabled smart cards and security keys

As the number one provider of physical access credentials on the planet, HID Global leads the way in seamless, converged physical and logical access.

Our market leading multi-factor authentication solution unlocks doors, data, and your desktop and offers:

ZERO TRUST ACCESS

Flexibly deploy a combination of form factors that meet your unique needs while maintaining a consistent security approach. Microsoft-compatible HID Crescendo security cards and keys enable passwordless authentication through the support of FIDO2 standards. Windows 10 devices joined to Azure or Hybrid Azure AD can securely access both on-prem and cloud resources through the ease of single sign-on or MFA.

A CONVERGED CREDENTIAL

Go beyond MFA and open doors with a credential that includes digital signing, data encryption, and physical access functionality.
